

Main authors (MAs)

MAs conceptualize the manuscript, identify potential co-authors, and decide possible work division

A MA uses the authorship form to formally invite PCAs and state expected contributions to the manuscript

MAs develop the manuscript based on agreed-upon contributions by PCAs

MAs add or remove potential co-authors due to changes in the manuscript

A MA sends the manuscript draft to PCAs along with the authorship form (preferably updating the online form)

MAs revise the manuscript

MAs finalize manuscript, review author contributions, and update the authorship form

A MA sends the final manuscript to PCAs

Corresponding author (one of the MAs) submits the manuscript to a journal

Potential co-authors (PCAs)

PCAs formally accept potential co-authorship, contributions, and author order
PCAs can indicate preference to be acknowledged without co-authorship at any stage of the manuscript preparation

PCAs perform the agreed-upon contributions

PCAs are kept informed about changes via timely updates to the authorship form

PCAs comment on the manuscript draft

PCAs confirm authorship by completing the authorship form
