Received and published: 25 January 2019

This is a nice study that should be published pending addressing the reviewers' concerns. One issue that I noticed is that the authors should cite the following study that already looked at a group of UK students several years ago and asked them about their preferred ways of receiving forecasting information.

Peachey, J. A., D. M. Schultz, R. Morss, P. J. Roebber, and R. Wood, 2013: How forecasts expressing uncertainty are perceived by UK students. *Weather*, 68, 176–
