Received and published: 19 June 2018

I have decided to withdraw this manuscript because I have become aware that a number of studies have recently been published that make this paper obsolete. Since I wrote this manuscript, a lot of work has been done which aims at clarification of the title term “measurement of knowledge transfer”. My criticism of the vagueness of the title term seems to be no longer appropriate and I do not want researchers who work towards its clarification to feel criticized.
