It was a great pleasure to review this manuscript. However, I agree with the Editor that there is an overwhelming focus on the technical details. There must be an equal focus, e.g. on aspects related to hydrology education and overall (methodological) design of the activity, to balance out such skewness. In my report, there are some suggestions for mainly the Introduction and Conclusion parts to address this issue.

There is a good potential in this manuscript, and I look forward to the revised version.
