

Interactive comment on “Web-based macroseismic intensity study in Turkey: entries in Ekşi Sözlük” by Deniz Ertuncay et al.

Anonymous Referee #1

Received and published: 24 August 2020

The authors analyze the user entries for some earthquakes occurred in Turkey area; the related intensities are estimated and the results between the user entries and the shakemaps are compared. The results are very interesting and the conclusions address an issue of importance to microseismic intensities and shaking estimations; the paper is well written and structured and the topic well fits the aims and scope of the journal. For these reasons I recommend the publication.
