Interactive comment on "25 years of seismology at school in France" *by* Jean-Luc Berenguer et al.

Chris King (Referee)

This is a well written review piece, which just needs a little tweaking to the English to be OK (see my comments on the attached M/S). However, I would like to see the conclusion being extended to include a section on how the lessons learned during the 25 years of the programme could be used, for example, to a) develop a similar seismology program in a different country/region and b) develop a similar program in France based on the collection of a different dataset, e.g in meteorology or in astronomy. These 'lessons learned' would be of great value to the development of education in general and to the development of technological or scientific instrument-based education in particular.
