

1. You have done a good job demonstrating how you conducted your qualitative analysis of the storyline themes. However, the qualitative analysis on the other items is missing. Can you share the data that you collected about the increased appearance of different features (e.g., wildlife areas, bike paths) and anthropogenic impacts? This could be in a table to complement Figure 1 to demonstrate how these have changed over time, since this is some of the data you center. This could be added to the existing Fig Share figure or created anew to be put in the text.

Thank you for the acknowledgement of our improved manuscript. While we understand the query, we do believe that we have already noted in the supplementary table, the anthropogenic impacts. We have now included additional information regarding the occurrence of wildlife areas and bike paths in an additional column.

2. Please move the Fig Share figure to supplemental so that it's static.

The link has now been moved to the Data availability section and removed from the methods.
